

R.V. Barenji, M. Hashemipour, D.A. Guerra-Zubiaga, *A framework for modelling enterprise competencies: from theory to practice in enterprise architecture.*

Following an extensive state of the art review, the paper presents definitions of enterprise competencies and related aspects (resource, activity and knowledge) as well as discussions on enterprise data infrastructure and conceptual categories (capability and cross-functional coordination and – integration). A competency knowledge base for a bicycle plant illustrates the capabilities of the proposed concept.
